# PLANTING THIS FALL for Spring Flowers

The beauty of your garden early next spring depends primarily on what you plant this fall. A garden full of Tulips, Hyacinths, Narcissus . . . it may be yours by planting NOW!

You need not wait until the beds that are in full bloom now are cleared. Plant the bulbs right between the flowers that are in bloom now and give them an opportunity to settle before cold weather sets in.

Fall-planted bulbs are unsurpassed for solid beds and borders. Yet even in the smallest garden a natural arrangement of a few dozen bulbs placed together in the foreground of some shrubs or grouped amidst perennials will give a colorful display.

For naturalizing among shrubs and perennials, the Snowdrops, Snowflakes, Chionodoxa, Scilla, and Grape Hyacinths are extra fine. Their graceful, showy little flowers give a particularly lovely effect if planted in small groups in the rock garden.

## Quality

It always pays to buy the best quality Seeds, Bulbs, and Roots obtainable, as, after all, the cost for these is small compared with the disappointment that is bound to be experienced from cheap goods. Burpee's Seeds, Bulbs, and Roots have a world-wide reputation for unsurpassed excellence. They are produced with the utmost care and are thoroughly tested to assure Burpee customers of planting the "Best That Grow."

You can have your money back any time within the year if you are not satisfied with the results from Burpee's Bulbs, Roots, or Seeds. But even with Burpee Quality Bulbs and Seeds, success in gardening depends largely upon cultivation, soil, and weather conditions. It is therefore agreed that in no case shall W. Atlee Burpee Co. be liable for more than the amount actually paid for the bulbs and seeds. This is the guarantee that protects all who purchase from Burpee in Philadelphia.

## Quick Reference Planting Chart

Remember, please, that depth to cover the bulbs depends greatly on the texture of the soil. As a general rule, plant deeper in sandy than in heavy soil. Bulbs for naturalizing or permanent displays should be planted deeply. The distance between the bulbs may also be varied according to the effect that is wanted in the garden.

# Giant Breeder Tulips—Famous for their Art Shades

Of all Tulips, the Breeders are, without question, the most striking. With their tall majestic growth and truly enormous blooms they rival the finest of the Darwins, but it is their rich coloring which places them in a class by themselves. Hues and tones not found in any other flower are present in the Breeders. They lean toward the unusual and artistic shades, and, therefore, enjoy great popularity with those who appreciate flowers that lend themselves to graceful and quaint displays. They are attractive if planted in beds, but make their finest appeal when grown amid perennials or in the foreground of shrubbery. They are also unexcelled for cutting.

# May-flowering or Cottage Tulips

The May-flowering or Cottage Tulips resemble in general habit and growth the Darwins. They also bloom at the same time. This is a great advantage as it permits the planting together of both types in one bed and having the varieties in bloom all about the same time. For bedding, to be planted either alone or in clumps, placed in the foreground of shrubbery, or in the perennial bed, they are unsurpassed. The May-flowering Tulips are also well suited for winter blooming as they are easily forced and grow into good-sized flowers under average care.

The color of the blooms is a fiery **crimson-red**, as bright and brilliant as or perhaps more so than any other Tulip. The form of the flowers is graceful and particularly attractive at that state of development when the petals are slightly reflexed. Nectar is not only valuable for garden use but is also much in demand as an early forcing variety. 3 for 32¢; 6 for 60¢; 12 for \$1.15; 25 for \$2.25; 50 for \$4.45; 100 for \$8.75.

# DARWIN TULIPS

The Darwin Tulips come into bloom after the Early Single varieties have finished flowering. They are stronger in growth, quite a bit taller, and the flowers are considerably larger. Tulip lovers should plant these in quantity because they make a wonderful display with their bright and rich colors. Most gardeners combine their Darwins with varieties from the Breeder and Cottage class because they all bloom about the same time and present an opportunity of more varied color combination.

The Darwin Tulips are also excellent for forcing in the house. Planted in pots or pans, they make a taller growth than the Early Single varieties and their fine range of good colors adds valuable material for house decoration. Ask for a free copy of the Burpee leaflet, "Bulbs for Winter and Spring Blooming."

While Darwin Tulips are superb for planting in formal beds, their boldness, stately habit, and rich color make them ideal material for planting in clumps of 6 to 12 bulbs amidst the perennial border or in the foreground of shrubs. They are suited for small gardens as well as large ones.

# Early Single Tulips—First to Bloom

**Keizerskroon**  
Crimson-scarlet,  
edged gold

The Early Tulips, by reason of their blooming season, which comes from 2 to 4 weeks ahead of other Tulips, always have been great favorites for garden display. They may be planted in beds, borders, or to supply cut-flowers. For blooming indoors during the winter they are superb. For outdoor blooming plant the bulbs as soon as available and cover 3 to 5 inches deep with fine soil. Where alternate freezing and thawing is likely to happen, cover the beds with a 2 to 3 inch layer of straw or pine boughs. The object is to shade the surface and not to keep the soil warm.

For indoor blooming in the house, plant in shallow pans, one variety to each pan, and keep cool and dark for from 6 to 8 weeks to start a strong root growth before bringing into the light.

# Early Double Tulips—For Beds and Forcing

Snowball

Growing Early Double Tulips does not require any particular skill. They do well planted in pans for winter blooming in the house and last even longer than the Singles. They are ideal for outdoor bedding because they make a compact growth and are, therefore, less subject to injury by winds. The varieties we list are all fully double and are highly appreciated because of their long blooming season. Their massive appearance suggests their use in formal beds particularly, or in borders where a bold color effect is wanted. For full cultural directions, ask for a free copy of the Burpee leaflet, "Bulbs for Winter and Spring Blooming."

## Rembrandt Tulips

The Rembrandt Tulips represent a class that has the characteristic growth of the Darwins, but the flowers differ in that the colors are "broken," representing color combinations in feathered, striped, and flaked designs of irregular arrangement. The Rembrandt Tulips are as easily grown as the Darwins. They make a striking effect in the garden and look their best if planted in clumps of a dozen or more somewhere in the border or in the foreground of shrubbery. While they can be grown indoors in pots, they are not as well suited for this purpose as other types.

**9302 Bougainville** A lovely pale lilac-rose flower with broad stripes of deep violet and a few occasional flakes of mahogany. The markings are very attractive. Height, 26 inches. 3 for 32¢; 6 for 60¢; 12 for \$1.10; 25 for \$2.10; 100 for \$8.00.

**9305 Caracalla** White marked with carmine-red flakes. A large, well-formed flower that adds brilliance to the garden. Good sturdy stems growing 21 inches tall. 3 for 32¢; 6 for 60¢; 12 for \$1.10; 25 for \$2.10; 100 for \$8.00.

**9313 Hebe** The three-color combination found in this flower never fails to attract attention. The ground is white, attractively relieved by stripes and flakes of soft lilac and deep maroon. 3 for 32¢; 6 for 60¢; 12 for \$1.10; 25 for \$2.10; 100 for \$8.00.

**9321 Red Prince** This is a particularly showy variety with flakes and stripes of a fiery scarlet shade upon a lovely soft rose ground. Large well-formed blooms. 3 for 32¢; 6 for 60¢; 12 for \$1.10; 25 for \$2.10; 100 for \$8.00.

**9326 Semele** A white background heavily striped and feathered with subdued old rose. A very effective variety of a quaint old-fashioned appearance. 3 for 32¢; 6 for 60¢; 12 for \$1.10; 25 for \$2.10; 100 for \$8.00.

**9330 Suzanna** The undertone of the flowers is a soft lilac shade enhanced by stripes and markings of a rich reddish brown. 3 for 32¢; 6 for 60¢; 12 for \$1.10; 25 for \$2.10; 100 for \$8.00.

**9333 Rembrandts Mixed** This is an excellent mixture, including the above and quite a few others belonging to the Rembrandt type. 6 for 50¢; 12 for 95¢; 25 for \$1.85; 50 for \$3.60; 100 for \$7.00; 500 for \$33.50; 1000 for \$65.00.

# Burpee's Hyacinths

Hyacinths are easily grown outdoors in beds or borders. The bulbs must be planted in the fall. Depending on the texture of the soil, they may be covered 2 to 6 inches deep and protected with a 2-inch layer of straw, leaves, or well-rotted manure during periods of severe winter weather. This cover must be removed promptly with the first warm spring days.

While large beds in regular outline planted with Hyacinths make a very good showing, gardeners should not overlook the possibilities that present themselves, particularly where Hyacinths are wanted in the smaller gardens. They are exceedingly showy, planted 6 to 8 bulbs together in clumps, in the foreground of shrubbery or in the perennial border. If planted in that way, the bulbs should be set 4 to 6 inches deep to escape any injury due to the cultivation of the beds in the summertime.

Planted deeply the bulbs will come up for a number of years and delight the gardener with their showy, sweet-scented spikes. While the spikes in subsequent years might not be as large, they are, nevertheless, desirable, and often a number of flower-spikes will develop where originally one bulb was planted.

For winter blooming in the house, place the bulbs in pots or pans filled with soil and keep dark and cool for a period of 6 to 8 weeks or until roots have developed in abundance. Then bring to a light warm room for the flower-spikes to open.

**9004 Enchantress** A lovely variety with attractive long-stemmed flower-spikes. The individual bells are closely set on a strong stem. They are a beautiful **light delft-blue** shaded with somewhat deeper blue. Valuable for garden display and for forcing.

**9006 Gertrude** Magnificent compact trusses closely set with rich **carmine-rose** bells. This is the favorite variety for outdoor bedding because the plants make a splendid uniform growth and bloom all at one time. Easily forced.

**9007 Grand Maitre** A glorious spike of large bells closely set on a long and strong stem. The color is a rich **deep porcelain-blue** of unusual appeal. Grand Maitre is equally well suited for outdoor growing and for forcing.

**9009 King of the Blues** Those who admire rich deep shades will be particularly pleased with King of the Blues. It is, in our opinion, one of the best belonging to the **deep blue** class, with elegant, long and graceful spikes.

**9014 Lady Derby** Clear **rich-rose** blooms forming a solid and strong spike of color. Grown indoors the flowers are a shade deeper in color. Magnificent and free blooming.

**9019 La Victoire** One of the earliest of all Hyacinths to come into bloom. The flowers are a brilliant **scarlet-red**. When grown indoors, they have a tendency to be lighter.

**9023 L'Innocence** Elegant large **white** bells gracefully arranged on a strong, heavy stem. It makes a beautiful display and is easily forced.

**9027 Marconi** This variety produces flowers just a shade deeper than Lady Derby. It is a bright **deep rose**, attractively flushed with white. Particularly suited for outdoor growing.

**9031 Yellow Hammer** This is quite a good deep shade of **creamy yellow**. Yellow Hammer is easily forced and gives elegant long showy flower-spikes. Also suited for outdoors.

## NARCISSUS—for Growing in Water and Pebbles

Paper White Narcissus

### 9460 Paper White

No other flowering bulb can be relied upon to give as quick and showy a display as the Paper White Narcissus. They may be had in bloom throughout the winter and spring by making succession plantings. All that is needed is a bowl, pebbles or fibre, and water. The American-grown bulbs which we offer are sure to give satisfactory results, but we recommend planting them not before the end of November, in order to insure a display of large, showy blooms. Our experience is that the best results are obtainable by late planting. It is important to get the bulbs to develop a good root system before the top growth begins by placing them in a cool cellar or closet for several weeks before they are brought to light and flowered in a cool room. 10¢ each; 3 for 27¢; 6 for 50¢; 12 for 95¢; 25 for \$1.85; 50 for \$3.60; 100 for \$7.00.

9459 **Soleil d'Or** This splendid Narcissus is in many ways similar to the Paper White but the blooms are an intense yellow color. The center of the cup is shaded with orange. It may be grown in pebbles or fibre, the same as the Paper Whites offered above. 18¢ each; 3 for 50¢; 6 for 90¢; 12 for \$1.75; 25 for \$3.35; 100 for \$13.00.

### 8650 The Chinese Sacred Lily To Grow Indoors in Pebbles and Water

The botanical name for the Chinese Sacred Lily is *Narcissus orientalis*. It resembles in many ways the Paper White Narcissus offered above but usually grows taller and produces larger blooms. It is easily grown in pebbles and water or in bowls filled with fibre, moss, or sand. Plant 3 to 4 bulbs to a bowl and keep dark and cool for not less than three weeks before bringing into a warm room. 12¢ each; 3 for 32¢; 6 for 60¢; 12 for \$1.10; 25 for \$2.10; 50 for \$4.10; 100 for \$8.00.

# NARCISSUS or DAFFODILS

There are a number of outstanding points that recommend Narcissus, or, as they are commonly called, Daffodils, to everyone who has a garden. Above all, they make a showy display in the garden. If grown under average conditions, they are not only permanent but actually increase in size and number with every year. From time to time it may be necessary to replant after the foliage has died down in early summer in order to give the bulbs sufficient space to gather nourishment and bloom freely. The sweet perfume of most varieties has a further attraction that makes Daffodils dear to most gardeners. The varieties we offer on the following two pages are perfectly hardy. They may be left in the ground, needing nothing more than perhaps a two-inch layer of well-rotted manure, straw, or leaves to insure perfect protection against severe freezing weather. Our free leaflet, "Bulbs for Winter and Spring Blooming," gives full planting directions.

# The First Flowers of Spring

**SNOWDROPS**

## 9496 Snowdrops

(*Galanthus nivalis*) The earliest of all outdoor flowering bulbs, ideal for naturalizing among perennials or in the foreground of shrubs. By making plantings in different locations it is easy to have a succession of blooms for three weeks and longer. Plant 2 inches deep and 3 to 4 inches apart. 6 for 35¢; 12 for 60¢; 25 for \$1.05; 50 for \$2.05; 100 for \$4.00; 500 for \$18.00.

**CHIONODOXA**

## 9480 Chionodoxa Luciliae

(*Glory of the Snow*) Of all the small early-flowering bulbs Glory of the Snow is our first choice. Its graceful flowers are white, more or less tipped with rich blue at the end of each petal. Plant 3 inches deep and 2 inches apart. Fine for rock gardens. 3 for 17¢; 6 for 30¢; 12 for 50¢; 50 for \$1.85; 100 for \$3.50.

## 9498 Snowflakes

(*Leucojum*) This is somewhat similar to the Snowdrops listed above but, if anything, still more attractive. The dainty white flowers are tipped with green gracefully nodding on a stem 7 to 8 inches tall. Easily grown and fine for cutting. Plant 2 to 3 inches deep and 2 to 3 inches apart. The flowers are borne in early spring. 3 for 25¢; 6 for 45¢; 12 for 85¢; 25 for \$1.65; 50 for \$3.20; 100 for \$6.25.

The early spring flowers have always had a particular appeal to all kinds of gardeners. It is only natural that after months of cold and freezing weather people will greet the tender little shoots that have pushed through the ground, even though snow and ice have not vanished entirely. First of all, we find the Snowdrops making their appearance. Planted in groups of twenty-five to five hundred bulbs, according to the effect wanted, they will present a great attraction in the early spring garden. Soon after the Snowdrops, Crocus with their brilliant colors will come into the picture. For permanent results, they should be planted among the shrubbery, where they will bloom year after year. *Chionodoxa* is the next spring flower to appear, and right here we want to urge all gardeners to give this little easily grown and showy spring-flowering bulb an opportunity to prove just how much of a display it will make. Not much later we find *Scillas*, *Grape Hyacinths*, and *Fritillaria* preceding the *Daffodils*, *Hyacinths*, and *Tulips*.

## Crocus—Harbingers of Spring

Hardly any other flower is so well adapted for naturalizing as the Crocus. Many people plant it in the lawn, where indeed it will make a good display. Yet, for permanent results, we suggest that it be planted in the foreground of shrubbery where the foliage can ripen properly and insure continued existence. Plant the bulbs about 4 inches apart and cover with 2 inches of fine soil. They bloom very early and make a wonderful display with their bright colors. Easily grown in shallow pots for winter blooming in the house.

## Planting Roses in the Fall

Roses and Shrubs cannot be dug until the first few frosts have ripened the foliage and the plants in general—that accounts for late delivery. Cover the ground where you intend to plant your roses with leaves or straw just deep enough to prevent the soil from freezing. In this way you will be able to plant your roses, no matter how late in the season they are received. After planting and when severe freezing weather is expected, heap soil over the pruned branches to completely cover them. The plants will be well protected by this mound of soil which should be removed early in the spring when the sap begins to flow. This is a sure way to avoid frost damage.

## Hybrid Perpetual or June Roses

The most satisfactory, all-around class for sections where winters are severe, because with a cover of earth over the young plant they will stand extreme freezing weather. Hybrid Perpetual Roses are vigorous and free blooming. Their hardiness, size, and free flowering habit have made them very popular. Because of late shipments, keep your soil frost-free until they arrive by placing a heavy layer of leaves, straw, or manure over the bed.

**96N62 American Beauty** Beautiful carmine-red blooms of largest size and always very double. Usually classed as a Hybrid Perpetual, owing to its vigorous growth.

**96N60 Frau Karl Druschki** A pure white variety with immense long buds and perfectly double flowers. Especially fine for bedding. Very large blooms.

**96N61 General Jacqueminot** Bright crimson flowers with a delightful sweet fragrance. Highly valued as one of the most desirable of all Hybrid Perpetual Roses. Perfectly hardy and a most profuse bloomer.

**96N65 Ulrich Brunner** Immense blooms of a bright cherry-red shade with a lovely rich fragrance. Ideal for trailing on a pillar.

*Prices of all Hybrid Perpetual Roses:*

This is the same class of Sweet Peas as grown for blooming in the greenhouse during winter and early spring. Some gardeners in the North use this type to a limited extent for their fall or spring sowing, as the plants come into bloom one to two weeks earlier.

## Mary Washington Asparagus Roots

In nearly all sections south of Philadelphia Asparagus Roots have proven to do particularly well if they are planted in the fall just before cold weather sets in. Since the introduction of the Washington varieties all the older kinds have become more or less obsolete, at least for the home gardener, and we are, therefore, offering the variety Mary Washington, which we consider the best. In answer to the question whether to plant one-year-old roots or two-year-old roots, we wish to state that for permanent results the one-year-old roots are preferable; but, of course, they take longer before they will give a good cutting.

Mary Washington is known for its resistance to rust. It produces thick, heavy, and long shoots which are straight, and closely folded at the tips. The color of the stalks is a rich dark green, and the tips are still a deeper green. When blanched, they are a beautiful creamy white. Mary Washington is known as a tremendous yielder and strong grower.

**9914 Seed of Mary Washington** We offer seed of the true strain. Pkt. 10¢; oz. 25¢; 4 ozs. 60¢; ½ lb. 85¢; lb. \$1.50, postpaid.

## 9982 Rhubarb Roots

**Myatt's Victoria** This is a most popular variety, with large luscious green stalks shaded bright crimson. They should be grown on rich soil, where they will increase in size and quality every year. For best results do not cut until the second spring after planting. Two roots for 35¢; 5 for 75¢; 10 for \$1.25, postpaid. By express: 100 roots \$7.50; 500 roots \$32.50.
